The Global Open Knowledgebase (GOKb)

WOLFcon 2024

Daniel Rupp

Product Owner GOKb

North Rhine-Westphalian Library Service Centre (hbz)

The GOKb is …

❖ … a global exchange platform for

  ⬚ metadata for electronic books, journals and other electronic resources

  ⬚ organised in packages

  ⬚ with unique and identified title records as reference

❖ … a system in the middle between raw provider data and ERM systems

❖ … optimised for automated processes via interfaces and identifiers

❖ … a free, community-based service

Benefits of using GOKb …

… instead of working with KBART files directly

❖ KBART errors are found and can be corrected through workflows

❖ Records are enriched with identifiers and additional information

❖ Automated updates mean that the process does not have to be repeated periodically

❖ Less effort and time needed through collaboration with other libraries / Curatory Groups

GOKb Global Open Knowledgebase

Review – ISSN Conflict ✕

ℹ️ In the package title, check if a p-ISSN has been marked as an e-ISSN or vice versa and correct it by deleting the incorrect ISSNs. You can add new identifiers by opening the detailed view of the title in a new tab by clicking on the title. Likewise, check the reference title and correct the ISSNs there. If the package title was imported via a KBART file, contact the provider and point out the incorrect ISSN.

🗐 Package Title to review

Asia Pacific Journal of Tourism Research ✎

Package: Taylor & Francis: Social Science & Humanities Library 2024 - Example 38

Reference Title: Asia Pacific journal of tourism research

Status: Current ✅   ↻
